SubC Imaging's mission is to continuously create the most technologically advanced and intelligent subsea imaging equipment and software for marine research, offshore oil and gas, aquaculture, and fisheries. With a global client list spanning more than 30 countries, SubC's underwater equipment, which consists of complete camera solutions, cameras, LEDs, and lasers, have been in use for over a decade. Several pieces of equipment deployed for applications like ocean observatories are continuously operating while consistently providing reliable performance.

Thanks to our modular designs and hands-on approach of working directly with our clients, we are able to provide tailor-made products that help them gain new subsea insights. This collaboration also affords us the opportunity to continually refine and upgrade our camera systems so that we're on the leading edge of subsea imaging technology. As leaders in our field, our goal is to provide complete solutions to subsea professionals.

From all-in-one solutions consisting of cameras, LEDs and lasers to the purchase of individual components, absolutely everything that comes out of our lab is purpose-built. We're here to walk you through the entire process, be it assembling a fully integrated solution that perfectly fits your needs or adding a camera, LED, laser, or DVRO to your current system.
